

Madison — User Guide & Feature Overview

DC-metro job market intelligence, powered by adversarial multi-agent AI

Madison puts a resume through a simulated hiring debate before the candidate ever applies. Two AI agents argue the candidate's fit — a **harsh hiring manager** stress-testing every claim, and a **candidate advocate** surfacing transferable strengths — grounded in live labor-market data. A third agent, the **synthesis judge**, reconciles both arguments into a fit score, a confidence rating, and a concrete 3-step action plan.

HOW IT WORKS

01

Upload
Candidate submits a resume and a target role or job posting. No account required.

02

Debate
Agent A (Harsh Hiring Manager) and Agent B (Candidate Advocate) argue fit live, grounded in BLS, NewsAPI, and real job-posting data.

03

Verdict
The Synthesis Judge delivers a fit score, a confidence rating, and a 3-step plan to close the gap.

FEATURE OVERVIEW

- Multi-source labor data — BLS, NewsAPI, and Kaggle job postings, fused in a 14-node n8n pipeline

— Adversarial two-agent debate + synthesis judge, powered by live Claude API calls

— DC-metro and clearance-corridor tuned — TS/SCI premiums, cloud-vs-NOC hiring trend tracking
- Weekly Signal newsletter — recurring market briefings delivered on a schedule

— Gradio interface, deployed and publicly testable on Hugging Face Spaces

— Every verdict includes a named skill/credential gap and a next step — never just a number

UNDER THE HOOD

DATA SOURCES	Bureau of Labor Statistics (BLS) API · NewsAPI · Kaggle LinkedIn job-postings dataset — 62 records verified at 100% data quality across all 3 sources
PIPELINE	14-node n8n workflow — ingest, clean, cross-reference, and route data into the debate layer
AI AGENTS	Agent A (Harsh Hiring Manager), Agent B (Candidate Advocate), Synthesis Judge — three independent roles on live Claude API calls
INTERFACE	Gradio, deployed on Hugging Face Spaces · average 11.4s from upload to full briefing
VALIDATION	Structured user testing with 3 live testers (Sri, Arjun, Chase) via Zoom, recorded and transcribed with Otter.ai
